Water leakage :

	Specific Area	Methods	If leakage appear
Part - 1 From reservoir to tank		Tank filling at 6l/min Net consumption at 2l/min Effective tank filling at 4l/min	Relay will stop the value at reservoir
Part - 2 From tank to meter.		Fixed pipe vol = Tank vol - (Tank remaining + Flats consumption)	Relay will stop the value at tank
Part - 3 Inside Flats.		 If all taps are closed then if  meter value increases hence leakage reported	Relay will stop the value at tank

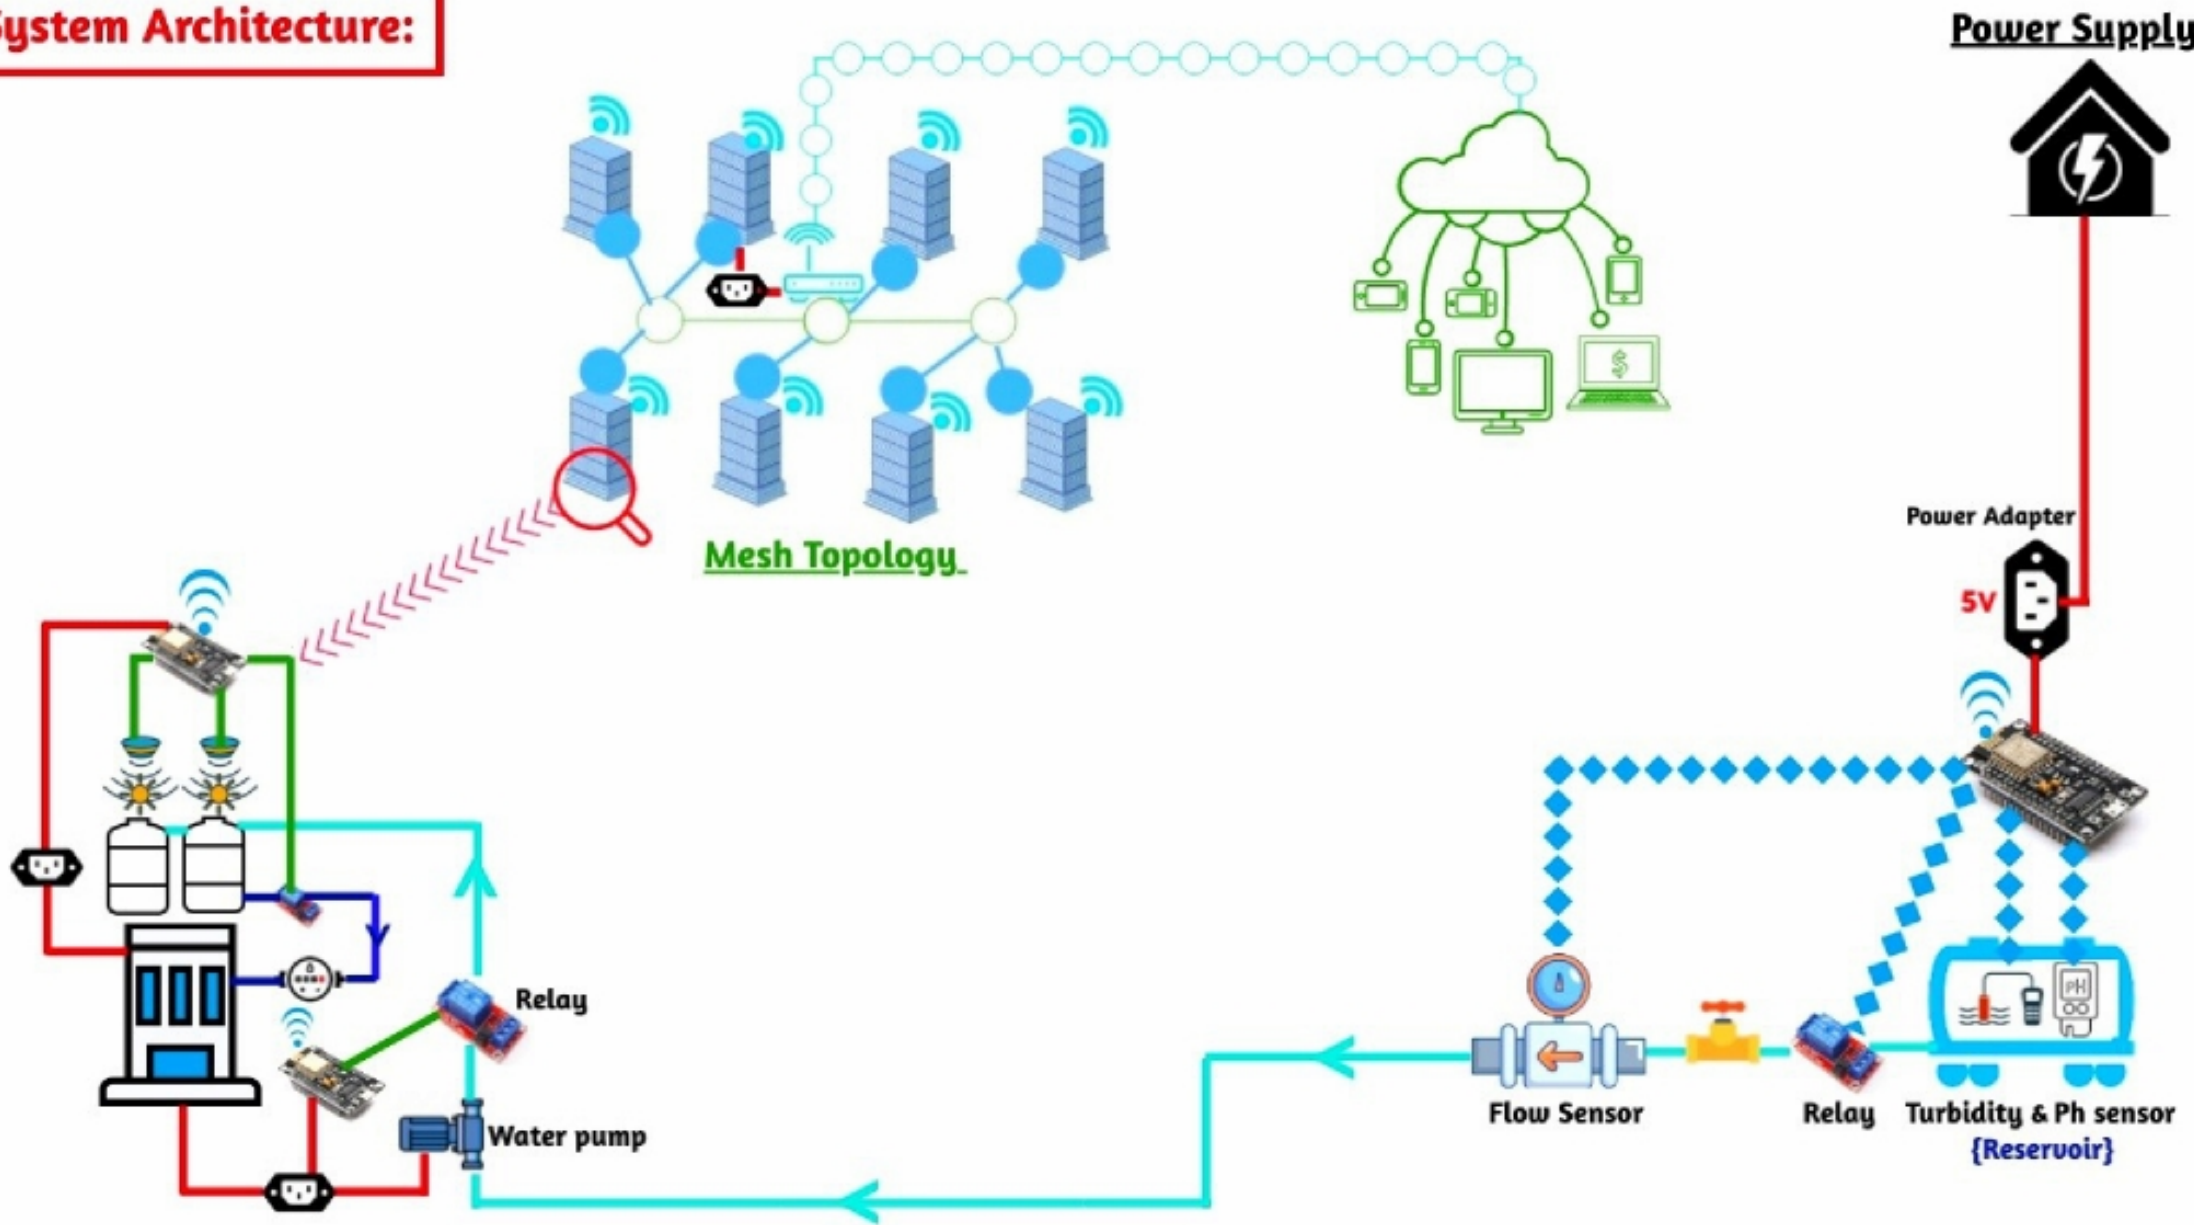

Mesh Topology.

Protocols

- *MQTT
- *Wi-Fi
- *UART

Ph of Water: 7.4

Turbidity: 0.6 NTU

Water Levels: T1-36L T2-73L

Start/Stop Motor Tank1 Tank2

Perform Water Leakage Test

- pH
- Turbidity
- Water Levels in tanks
- Manual Control of tanks

Hardware Costing:

S.No.	Component Name	Price (Rs.)	Qty	Total Price (Rs.)	Life Span (yr)	Resources
1.	Ultrasonic Sensor	368	16	5888	1	Link
2.	Relay	40	17	680	1	Link
3.	NodeMCU	240	17	4080	1	Link
4.	PH Sensor	1765	1	1765	0.5-2	Link
5.	Turbidity Sensor	746	1	746	0.5-2	Link
6.	Flow Sensor	225	1	225	1-2	Link
7.	Adapter + USB	219	17	3723	1	Link
8.	Router	999	1	999	1-2	Link

Complete Costing:

S. No.	Requirements	Monthly charges (Rs.)	Yearly Charges (Rs.)
1.	Hardware	18106	18106
2.	Software (vultr)	187	2244
3.	Internet	69	828
4.	Electricity	100	1200
5.	Installation	600	600
6.	Maintenance	500	500
	Total	19562	23478

BENEFITS

Water quality is checked before supply

Never run out of water with Automatic tank filling

Early end to end leakage detection

Saves your water and electricity bills

Can be easily incorporated in existing infrastructure

Data on cloud for water consumption monitoring

24*7 remote access

Real time notifications and alerts

Everything at your finger tip with complete visualization

Technology that is pocket-friendly

Thank You
